Frontier Pharmaceutical Inc. introduces a New Topical Antiseptic A stabilized Chlorine Dioxide Complex in Aqueous Solution.

Melville NY: **Frontier pharmaceutical Inc.** has introduced a new line of Topical Antiseptic Products based on the universal antiseptic properties of Chlorine Dioxide. A proprietary formulation containing a stabilized form of chlorine dioxide complex in an aqueous base has eliminated the need to mix separate components to obtain the active ingredient.

The new antiseptic formulation is being marketed under the name **Ciderm®SP Topical Antiseptic Solution/Spray** . This topically applied antiseptic is used in the management of skin infections, cuts, ulcers, abrasions, flea and tick bites, burns, wound care and surgical incisions Chlorine dioxide is a versatile biocide effective against all bacteria, yeast, fungi, and viral pathogens. **Ciderm®SP** is safe for topical use, non-irritating or damaging to the skin or fur. It promotes healing, reduces inflammation, and scarring. **Ciderm® SP** is available in 1oz dropper or spray and 8oz spray sizes.
